1 Welcome to GTM Bot Maker

Build your own MetaTrader 5 robot from ready blocks - no programming, no scripts.

GTM Bot Maker is an Expert Advisor for MetaTrader 5 that turns a trading idea into a working robot. You choose how a trade starts, which conditions must agree, how it ends and how much it may risk - and the bot trades it on one or many symbols, live, from one chart.

Everything is done on the chart: a builder with eight tabs, a live **signal matrix** that shows what every filter says right now, a **preview** that replays the bot on past candles with its win rate, and a friendly **guide robot** that explains what is happening in plain words - with an optional AI chat that can build a strategy from a sentence.

The main panel and the guide robot, as they appear on the chart.

What it can do

Block	Choices
Entry	MA CROSS · CONFIRM ONLY · GRID · BREAKOUT; MARKET / STOP / LIMIT orders
Filters (15)	TREND, RSI, BB, MACD, STOCH, ADX, CCI, SAR, ICHIMOKU, SUPERTREND, CANDLE, PIVOT, CUSTOM, TIME, NEWS
Exits	TP / SL in money or from ATR, trailing, break-even, partial close, exit by any filter
Risk	fixed lot, risk %, lot per 1000, daily loss / target, all-bots guard, own capital per bot
Multi-symbol	up to 12 symbols from one chart, each with its own bot
Tools	preview with RR boxes, optimizer, trades box, capital box, 8 templates, save / share bots
Assistant	live guide in 12 languages, AI chat (your own key, any provider), Telegram remote

What it does not do

GTM Bot Maker is a **tool**, not a ready-made money machine. It trades exactly the rules you give it. It does not promise profit, it does not find a strategy for you, and a rule that lost money in the past will usually lose money in the future. Test every bot on a demo account and in the strategy tester before real money.

2 Installation and first start

Five minutes from the file to a running panel.

Install

- 1 Buy or rent GTM Bot Maker on the MQL5 Market. MT5 installs it for you: it appears under **Navigator → Expert Advisors → Market**.
- 2 Open a chart (for example EURUSD H1) and drag GTM Bot Maker onto it. Tick **Allow Algo Trading** on the Common tab.
- 3 Press OK. The panel appears on the chart and the guide robot says hello.
- 4 Turn the toolbar button **Algo Trading** on (green).

Allow the internet addresses (only for AI and Telegram)

The trading itself needs no internet setup. The optional AI chat and Telegram need one step: **Tools → Options → Expert Advisors**, tick **Allow WebRequest for listed URL** and add the address the guide shows at start (it prints *AI: ... allow https://...*):

Service	Address to add
Google Gemini	https://generativelanguage.googleapis.com
OpenAI	https://api.openai.com
Anthropic Claude	https://api.anthropic.com
Groq / OpenRouter / DeepSeek / Mistral / xAI	the address printed by the guide
Telegram	https://api.telegram.org

The first minute

The bot starts with a safe blank strategy: nothing trades until you switch something on. The guide robot tells you what it sees. Open **BUILDER**, or press **MY BOTS** and load one of the 8 templates to start from a working example.

Everything you build is saved automatically and comes back after a restart of MT5, a timeframe change or a new template on the chart.

3 A tour of the screen

Seven boxes. Each one moves by its title bar and resizes by its edges or corner.

Box	Opens with	What it is for
MAIN	always	account, symbol switcher, SIGNAL MATRIX, close buttons, the menu
GUIDE	always	the robot, the live chat (guide + AI), the command line
BUILDER	BUILDER	the eight tabs where the bot is made
HELP	HELP / a tip click	explains the open tab or the control you clicked
PREVIEW	PREVIEW	past signals, win rate, RR boxes, optimizer
TRADES	TRADES	live and closed trades of all bots
CAPITAL	CAPITAL	each bot's own money and profit

Moving and sizing

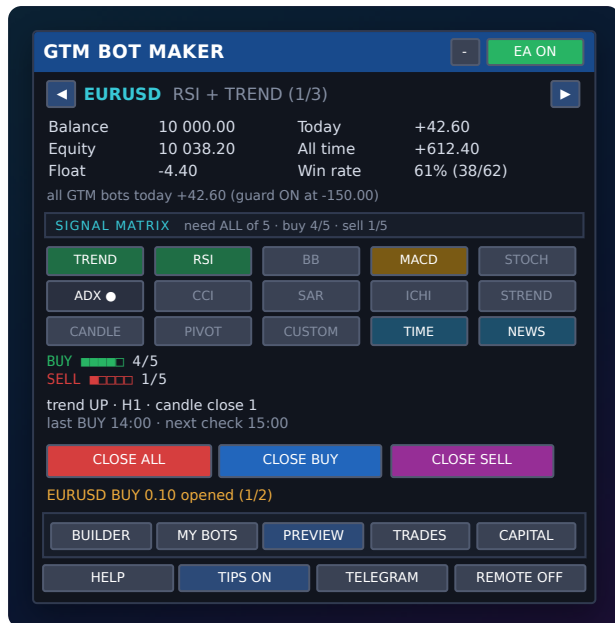

- Drag a **title bar** to move a box. Drag an **edge** or the **corner grip** to make it bigger or smaller.
- The BUILDER, HELP, PREVIEW, TRADES and CAPITAL boxes are **docked** to the main panel until you move them; the small **D** button docks them again.
- The **-** button rolls a box up to its title bar (the builder keeps every setting).
- In the GUIDE box the small blue bar under the chat changes **only the chat height**; the corner resizes robot and chat together.

Hover tips

Rest the mouse on any button for half a second and a short tip appears. **Click the tip** and the HELP box explains that control in detail. When you know the panel, switch them off with **TIPS ON**.

4 The main panel and the signal matrix

Everything the bot is thinking, on one card.

Main panel

Top

EA ON switches new trades on or off for every symbol (exits keep working). The arrows switch the symbol you are editing.

Account

Balance, equity, open profit, today, all time and win rate of this bot, and the total of **all GTM bots on all charts** today.

SIGNAL MATRIX

One tile per filter, live:

- **green** - this filter says BUY
- **red** - it says SELL
- **gold** - both sides are fine
- **dark with a dot** - it blocks trading now
- **grey** - filter is OFF

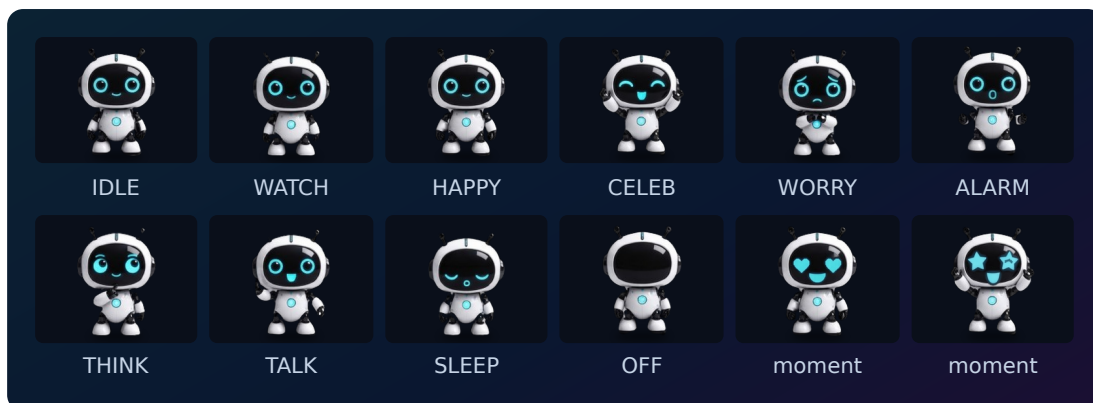

Click a tile to open that filter in the builder. The BUY / SELL bars count how many ON filters agree; *need ALL* means every ON filter must agree.

Bottom

CLOSE ALL **CLOSE BUY** **CLOSE SELL** close this bot's trades. The menu opens the other boxes.

5 The guide robot, the chat and the AI

A live robot that explains, and an assistant that builds.

Ten moods, and 100 eye / mouth moments on top of them.

The robot shows the bot's state: idle, watching a signal line up, happy with a profit, celebrating a win, worried at a loss, alarmed (wide spread, a stop), thinking (AI), talking, sleeping (quiet market) or off. Its eyes follow the mouse and it blinks; when something happens - a trade opens, a win, a loss, a click on it - it shows a short expression. You can switch the pictures or the animation off in the inputs.

The live guide

Without any AI key the guide already talks: it tells you when a filter changes side, why a signal was not taken, when a trade opens or closes, and it gives tips. **TALK** sets how much it says (QUIET / NORMAL / CHATTY).

AI chat with your own key

Paste an API key of **any** provider into *Inputs* → *API KEY*. With Provider = AUTO the bot recognises the key itself (Google Gemini **AIza...** or **AQ...**, Anthropic **sk-ant-**, Groq **gsk_**, OpenRouter **sk-or-**, xAI **xai-**, OpenAI **sk-**). For DeepSeek, Mistral or any other OpenAI-style server type its model name or its Base URL. Type **/aitest** to check the key - the answer shows the provider, the model and any error.

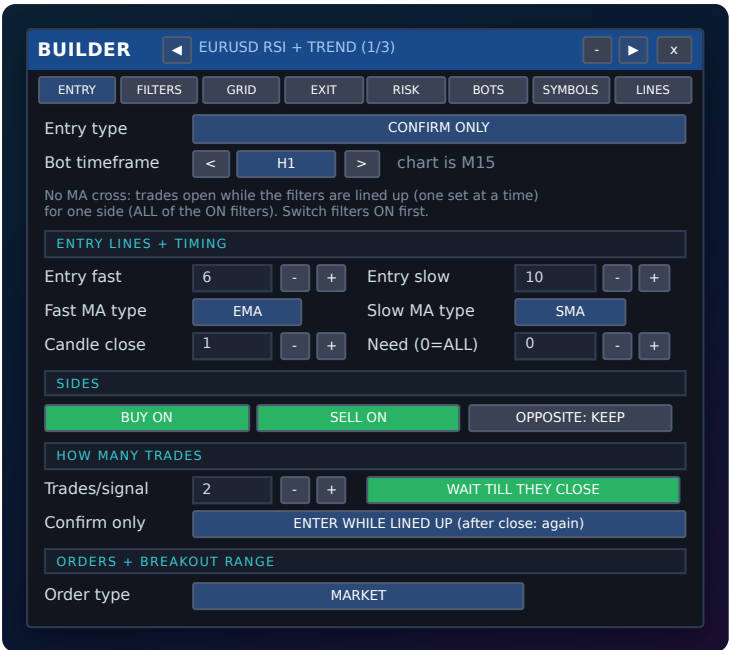

Then just write: "make a bot that buys when RSI leaves oversold in an up trend, 1% risk". The AI answers and sets the builder. Anything that touches money is shown as a proposal with **APPLY** first. Limits per minute and per day protect your key's quota.

Languages

The guide, the help and the tips speak Singlish, English, and - translated once by your AI key and saved - Spanish, Portuguese, French, German, Turkish, Indonesian, Vietnamese, Thai, Japanese and Chinese. The AI chat can answer in 14 languages. Press the language buttons in the GUIDE title.

6 Builder: ENTRY - how a trade starts

Four ways in, and how many trades each signal opens.

BUILDER - ENTRY

Entry type	A trade starts when
MA CROSS	the entry fast MA crosses the entry slow MA and the ON filters agree
CONFIRM ONLY	the ON filters line up for one side - no cross needed
GRID	orders every N points, closed together as a basket (GRID tab)
BREAKOUT	a candle closes beyond the high / low of the last N candles

Bot timeframe - the candles the bot reads; < > step through M1 ... MN1. The chart can show another timeframe.

Candle close 1 waits for the candle to close (recommended); 0 decides on the live candle.

Need - 0 = every ON filter must agree; 2 = any two are enough.

How many trades

- **Trades/signal** - one signal opens this many trades at once (1-20). With RISK % the risk is shared between them.
- **WAIT TILL THEY CLOSE** - while this bot has trades open on the symbol, a new signal is skipped even when the filters are OK again. When they close, the next candle can trade again. **ADD WHILE OPEN** adds trades up to *Max trades*.
- **CONFIRM ONLY** - *WHILE LINED UP* enters whenever the filters agree (with WAIT: one set of trades at a time); *FRESH LINE-UP ONLY* enters only on the candle where they come together.
- **OPPOSITE: CLOSE** - a sell signal closes the open buys (and the other way).
- **Order type** - MARKET opens at once; STOP places a breakout order beyond the signal candle; LIMIT waits for a pullback. Expire bars deletes an order that did not fill.
- **Fast / Slow MA type** - SMA, EMA, SMMA or LWMA for the entry lines.

7 Builder: FILTERS - the conditions

Fifteen filters. Switch on the ones you want; each has its own modes, numbers, timeframe and exit.

Filter	MODES	What it reads
TREND	WITH TREND · AGAINST	two slow MAs: fast above slow = only BUYS
RSI	50 LINE · OB / OS · CROSS BACK · STRONG	oversold / overbought and momentum
BB	TOUCH · BREAKOUT · MIDDLE · RE-ENTRY	Bollinger bands bounce or break
MACD	ABOVE SIGNAL · CROSS · ZERO LINE · RISING	momentum and its turns
STOCH	K ABOVE D · OB / OS · CROSS BACK · K/D CROSS	stochastic oscillator
ADX	DI + STRONG · STRONG ONLY · WEAK ONLY	trend strength (and +DI / -DI side)
CCI	ZERO LINE · OB / OS · CROSS BACK · STRONG	commodity channel index
SAR	PRICE vs SAR · SAR FLIP	parabolic SAR dots
ICHI	ABOVE CLOUD · TK CROSS · TENKAN>KIJUN · CLOUD BREAK	Ichimoku cloud
STREND	DIRECTION · FLIP	Supertrend from ATR
CANDLE	COLOUR · N IN A ROW · BREAK H/L · STRONG BODY	pure price action
PIVOT	ABOVE PIVOT · BOUNCE S1/R1 · BREAK R1/S1	daily / weekly / monthly pivots
CUSTOM	A > LEVEL · A vs B · A CROSS B · ARROWS	any indicator you own (chapter 13)
TIME	TRADE INSIDE · SKIP INSIDE	server hours window
NEWS	AVOID · AVOID + CLOSE	MT5 economic calendar, both currencies

Every filter box has

- **ON** / **OFF** - use it for entries.
- **MODE** - the rule (the two lines under it say exactly when it says BUY and SELL).
- **TF** - its own timeframe: an H4 trend filter on an M15 bot. With candle close ON a higher timeframe uses its last *closed* candle, so it never repaints.
- **EXIT** - close the trade when this filter turns against it (it does not have to be ON for entries). **ONLY WINNERS** in EXIT leaves losing trades to the SL.
- **CHART: SHOW / HIDE** - draw the indicator on the chart. This never changes the filter itself.
- The numbers - periods and levels, with - / + or typed in.

8 Builder: GRID and EXIT

Baskets of orders, and every way a trade can end.

GRID

Setting	Meaning
Step points / STEP: ATR x	distance between orders, fixed or from the ATR (works on any symbol)
Max levels	most orders per side
Lot x	1.00 = same lot every order. Above 1 is martingale - use with great care
Basket TP \$ / SL \$	all orders of a side close together at this profit / loss
Basket trail \$	trails the basket profit
TYPE: AVERAGE / FOLLOW	add against the move, or with it
START: WAIT FOR FILTERS	the first order waits for the filters

A grid needs a HEDGING account and always a basket SL.

EXIT

Setting	Meaning
TP \$ / SL \$	take profit and stop loss in account money
AUTO (ATR)	SL = ATR x SL mult, TP = ATR x TP mult - the market decides the distance
TRAIL	after Trail start \$ the SL follows price at Trail \$ distance
B/E	after BE after \$ the SL moves to entry (+ BE lock \$)
PARTIAL	at Partial at \$ closes Partial % of the lot; the rest runs (optional B/E)
EXIT BY FILTERS	any filter with EXIT ON closes the trade when it turns against it

9 Builder: RISK and the bot capital

Decide what the bot may lose before it wins anything.

BUILDER EURUSD RSI + TREND (1/3)

ENTRY FILTERS GRID EXIT **RISK** BOTS SYMBOLS LINES

Lot mode **RISK %**
the lot is sized so the ATR stop loses Risk % of the (bot) balance

Lot (0=min) 0.10 - + Risk % 1.00 - +
Max trades 4 - + Max spread 25 - +
Day loss \$ 60 - + Day target \$ 0 - +

ALL GTM BOTS TOGETHER (every chart)

All bots loss \$ 150 - + All bots target \$ 0 - +

BOT CAPITAL - this symbol's own money (0 = the account)

Bot capital \$ 500 - + Capital stop % 30 - +
balance 538.20 equity 533.80 P/L +33.80 (6.8%) stop at 350.00

RESET P/L CAPITAL BOX: SHOWN

BUILDER - RISK

- **Lot mode** - FIXED lot; RISK % (lot sized so the ATR stop loses Risk % - needs AUTO SL); PER 1000 (lot for every 1000 of balance).
- **Max trades** and **Max spread** per symbol.
- **Day loss / target** - this symbol stops for the day.
- **ALL BOTS loss / target** - every GTM bot on every chart together; when hit, all close and stop for the day. **RESUME** allows trading again.

Bot capital

Give a symbol's bot its own money, for example 500 on a 10 000 account. **Balance** = capital + closed profit since it started, **equity** = balance + open trades. RISK % and PER 1000 lots use the bot balance, not the account. **Capital stop %** closes its trades and stops it when the equity falls that far (0 = when the money is used up). **RESET P/L** starts counting again.

SYMBOL	CAPITAL	BALANCE	OPEN	EQUITY	P/L	%	
EURUSD	500.00	538.20	+12.40	550.60	+50.60	+10.1%	ON
XAUUSD	1000.00	962.00	+8.10	970.10	-29.90	-3.0%	ON
GBPJPY	account		-3.90				-
ALL	1500.00	1500.20	+20.50	1520.70	+20.70	+1.4%	

click a symbol in SYMBOLS to edit its capital (RISK tab)

The CAPITAL box: every bot with its own money, movable and resizable.

10 BOTS, SYMBOLS and LINES

Keep your bots, trade many symbols, and draw what matters.

BOTS

Type a name and press **SAVE**; press again to overwrite a bot with the same name. **LOAD** puts a saved bot on the symbol you are editing. **NEW** starts blank. Bots are small files in `Terminal\Common\Files\GTM\bots` - copy a .bot file to a friend and they can load it.

Template	Idea
MA CROSS	classic fast / slow cross with the trend filter
RSI REVERSAL	RSI leaves the zone, in the trend
BB BOUNCE	bands touch and re-entry
MACD MOMENTUM	MACD cross with ADX strength
BREAKOUT	N-bar range break with STOP orders
GRID CLASSIC	averaging grid with basket TP / SL
GRID + RSI	grid that starts on RSI
BLANK	empty start

SYMBOLS

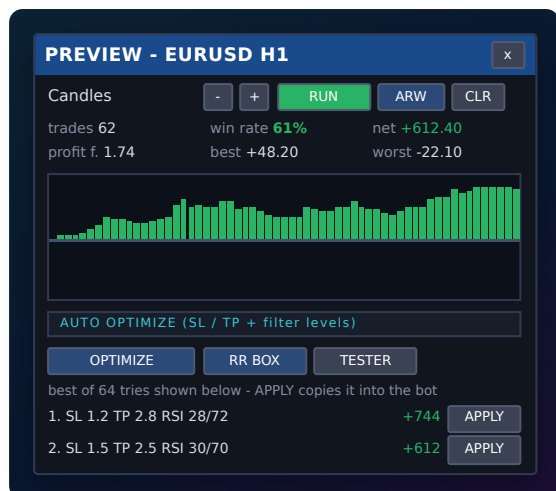

One chart trades up to 12 symbols, each with its own bot. Tick a symbol in the Market Watch list: it starts with a copy of the bot you are editing. Click a symbol's name to edit *its* bot - every tab then changes that symbol. ON / OFF pauses one symbol, CHART shows it on this chart, X removes it (close its trades first). The session is saved and comes back after a restart.

LINES

The four MA lines (trend fast / slow, entry fast / slow): method, period, colour, style, width. The indicator buttons show or hide each filter's indicator on the chart. **CHART TF = BOT TF** switches the chart to the bot timeframe so the drawn values match what the bot reads.

11 PREVIEW, RR boxes and the optimizer

See what the bot would have done - before it risks anything.

PREVIEW

RUN replays the bot on the last N candles of the symbol: entries on the next open, exits on SL / TP (both in one candle count as SL), opposite signals and exit filters. You get trades, win rate, net, profit factor, best / worst, streaks and an equity bar chart.

RR BOX draws each preview trade as a trading-view style box: red SL box, green TP box, the entry line and TP1-TP4 at quarters of the target. The boxes end exactly where the trade ended.

OPTIMIZE tries SL / TP and the level numbers of your filters and lists the best five; **APPLY** copies one into the bot.

TESTER saves the bot as **tester_SYMBOL** and shows the steps: Ctrl+R, choose the EA, type that name in *Load this saved bot at start*, Start. (MT5 cannot open the tester from an EA.)

RR box on a preview trade: SL box, TP box, TP1-TP4, and the entry / exit arrows.

The preview is a guide, not a promise: it uses candle prices, without spread changes or slippage. Confirm with the strategy tester and a demo account.

12 Examples: build four bots

Follow these once and the builder is yours.

Or simply tell the AI: "grid on EURUSD, ATR step, 5 levels, basket TP 8, SL 40, only in a quiet market" - and check what it set before APPLY.

Example 1 - RSI pullback in the trend (CONFIRM ONLY)

- 1 Open **BUILDER** → **ENTRY**. Entry type: **CONFIRM ONLY**, Bot timeframe **H1**, Candle close **1**, Need **0**.
- 2 **FILTERS** → TREND: ON, mode WITH TREND, fast 80 / slow 205. Set its **TF** to **H4** for a bigger picture.
- 3 RSI: ON, mode **CROSS BACK**, period 14, levels 70 / 30. It says BUY when RSI comes back above 30.
- 4 RSI box: **EXIT ON** - a buy is closed when RSI reaches the upper level.
- 5 **EXIT** → AUTO (ATR) ON: SL x 1.5, TP x 2.5, TRAIL ON.
- 6 **RISK** → Lot mode RISK %, Risk 1, Max trades 2, Day loss 50.
- 7 **ENTRY** → Trades/signal 1, **WAIT TILL THEY CLOSE**. Then **PREVIEW** → **RUN** with **RR BOX** on.
- 8 **MY BOTS** → name it *RSI TREND H1* → **SAVE**.

The bot buys when RSI crosses back above 30 while the H4 trend is up.

Example 2 - MA cross with ADX, time and news filters

- 1 ENTRY: **MA CROSS**, entry fast 6 **EMA**, entry slow 21 **SMA**, timeframe M30.
- 2 FILTERS: ADX ON (STRONG ONLY, level 22) so it trades only when a trend runs; TIME ON, TRADE INSIDE 8 - 20.
- 3 NEWS ON, AVOID + CLOSE, 30 min before / after, impact 1 (high).
- 4 EXIT: TP 20 \$, SL 10 \$, B/E after 8 \$, PARTIAL at 12 \$ closes 50 %. ENTRY: OPPOSITE: CLOSE.
- 5 SYMBOLS: tick GBPUSD and USDJPY - both start with this bot. Click each name to fine-tune its numbers.

Example 3 - a safe grid with its own capital

- 1 ENTRY: **GRID**. GRID tab: STEP: ATR x 1.5, Max levels 5, Lot x 1.00, Basket TP 8 \$, **Basket SL 40 \$**, TYPE AVERAGE.

- 2 START: WAIT FOR FILTERS with ADX WEAK ONLY (quiet market) and RSI OB / OS for the side.
- 3 RISK: Bot capital 300, Capital stop 25 %. CAPITAL box on - watch the basket against its own money.

Example 4 - breakout with STOP orders

- 1 ENTRY: **BREAKOUT**, Range bars 20, Order type **STOP**, Order dist 30 points, Expire bars 3.
- 2 FILTERS: TREND ON (WITH TREND) so only breakouts in the trend direction; ADX ON (DI + STRONG, level 20).
- 3 EXIT: AUTO (ATR) SL x 1.2, TP x 3; PARTIAL at half the target with B/E.
- 4 Trades/signal 2 - one can be closed by PARTIAL, the other runs to the target.

Checklist before going live

Before real money	Why
PREVIEW on 1000+ candles, RR BOX on	see every entry and exit on the chart
Strategy tester (TESTER button), every tick	real spread and order handling
Two weeks on a demo account	live data, news, weekends
Day loss, ALL BOTS loss, bot capital set	a bad day cannot become a bad month
Save the bot (MY BOTS)	you can always return to the tested version

13 Using a custom indicator

Any indicator you own - free, bought or your own - can become a filter or the whole entry.

- 1 Copy the indicator (.ex5) into **MQL5\Indicators** - or buy it on the Market: it goes to **MQL5\Indicators\Market**.
- 2 Put it on a chart once and open **Data Window** (Ctrl+D). Move the mouse over candles: each line of the indicator is a **buffer**, counted from 0 in the order shown. Note which buffer holds the BUY arrow and which the SELL arrow (or the line you want).
- 3 Write down its inputs in order from the indicator's Inputs tab, e.g. *14, 2.0, true*. Leave them empty to use its defaults.
- 4 BUILDER → FILTERS → **CUSTOM**. **Name**: the path under MQL5\Indicators without .ex5, e.g. *Examples\ZigZag* or *Market\Super Arrows*. **Inputs**: the list from step 3.
- 5 Choose the **MODE** and the buffers (next table), switch it **ON**, and **CHART: SHOW** to see it drawn. If the name is wrong the guide says *custom indicator not found*.
- 6 Run the PREVIEW: the arrows of the bot must sit on the indicator's signals. If they do not, a buffer number is wrong.

FILTERS - CUSTOM

Candle close 1 is strongly recommended with custom indicators: many of them redraw the live candle. On a higher TF the bot reads its last closed candle.

MODE	BUY when	SELL when
A > LEVEL	buffer A is above Level	below Level
A vs B	A is above B (two lines)	A is below B
A CROSS B	the candle where A crosses up through B	crosses down
ARROWS	buffer A has an arrow on the candle	buffer B has an arrow

Example - an arrow indicator as the entry

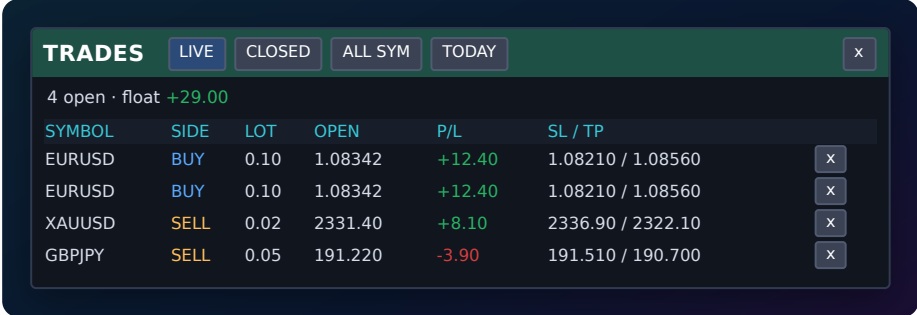

ENTRY: CONFIRM ONLY, FRESH LINE-UP ONLY, candle close 1. FILTERS: CUSTOM ON, mode ARROWS, buffer A = 0 (buy arrows), buffer B = 1 (sell arrows). Add TREND ON with TF H4 so only arrows in the trend are taken, and EXIT: AUTO (ATR). Every closed candle with an arrow in the trend direction opens one trade.

Example - an oscillator line with a level

A momentum indicator whose buffer 0 swings around 0: mode A > LEVEL, buffer A = 0, Level = 0. Use it as a filter next to MA CROSS so a cross is only taken when momentum agrees. Switch its EXIT ON to close when momentum turns.

14 TRADES box, Telegram and remote control

Watch every bot, from the chart or from your phone.

The screenshot shows a 'TRADES' window with tabs for 'LIVE', 'CLOSED', 'ALL SYM', and 'TODAY'. The 'LIVE' tab is selected. It displays '4 open · float +29.00'. Below is a table with columns: SYMBOL, SIDE, LOT, OPEN, P/L, and SL / TP. Each row has a small 'x' button to its right.

SYMBOL	SIDE	LOT	OPEN	P/L	SL / TP
EURUSD	BUY	0.10	1.08342	+12.40	1.08210 / 1.08560
EURUSD	BUY	0.10	1.08342	+12.40	1.08210 / 1.08560
XAUUSD	SELL	0.02	2331.40	+8.10	2336.90 / 2322.10
GBPJPY	SELL	0.05	191.220	-3.90	191.510 / 190.700

LIVE tab: every open trade and order; profit green, loss red, buy or sell alike. CLOSED: today / 7 / 30 days with win rate.

The **x** in a row closes that one trade (or deletes a pending order).

Telegram

- 1 In Telegram talk to **@BotFather** → /newbot → copy the TOKEN. **@userinfobot** gives your CHAT ID.
- 2 Inputs → TELEGRAM: Telegram ON, BOT TOKEN, CHAT ID. Allow <https://api.telegram.org> (chapter 2).
- 3 You receive opens, closes (with a chart picture if you want) and a daily report. With **REMOTE** ON you can send the same /commands as the chat; money commands ask for yes first.

15 Chat commands

Type them in the chat box (or send them on Telegram). Everything the buttons do, in one line.

Command	Does
<code>/help /status /bot</code>	what the bot is doing
<code>/ea on off /buy on off /sell on off</code>	switch trading, or one side
<code>/entry cross confirm grid breakout</code>	entry type
<code>/tf h1</code>	bot timeframe
<code>/rsi on mode obos 14 70 30</code>	any filter: <code>/trend /bb /macd /stoch /adx /cci /sar /ichi /strend /candle /pivot /custom /time /news</code>
<code>/rsi tf h4 /rsi exit on</code>	a filter's timeframe and exit
<code>/tp 20 /sl 10 /trail 5 /auto on /be on 8 1</code>	exits
<code>/lot 0.1 /lotmode risk /risk 1 /max 3 /dayloss 50</code>	risk
<code>/tps 2 /waitclose on /cfmode while new</code>	trades per signal, wait, confirm mode
<code>/capital 500 /capstop 30 /capreset /capbox</code>	bot capital
<code>/method fast ema</code>	MA type of a line
<code>/symbol add XAUUSD /symbol XAUUSD</code>	add a symbol / edit its bot
<code>/save NAME /load NAME /template rsi</code>	bots and templates
<code>/preview 500 /optimize</code>	preview and optimizer
<code>/close all buy sell</code>	close trades
<code>/lang es /ui fr /talk chatty</code>	AI language, guide language, how much it talks
<code>/aitest /usage</code>	check the AI key, calls used today

End a long line with **+** to keep typing on the next one. Commands also work inside AI answers - the AI uses the same language.

16 Inputs at a glance

The inputs are only the starting values - you change almost everything live in the builder.

Group	Contains
BOT	entry type, lot, magic number, comment, load a saved bot at start
Timeframe	bot timeframe
FILTER: ...	start values of every filter (the builder changes them live)
GRID	grid start values
Trading	EA on, buy / sell on, max trades, spread, trades per signal, wait, confirm mode, bot capital
SYMBOLS	symbols to start with, and whether the session is restored
RISK / TP / SL / ATR	start values of the risk and exit tabs
Panel	position, size, colours, robot pictures, animation, language, tips
AI CHAT	provider (AUTO), key, model, base URL, reply language, limits
TELEGRAM	token, chat id, remote, notifications

Each input has a plain-English note in MT5's Inputs tab. After the first start the builder's settings win over the inputs, because the session is saved; change the *magic number* to run a completely separate bot family on another chart.

17 Questions and answers

The things traders ask most.

The filters are green but no trade opened.

MA CROSS needs a fresh cross; CONFIRM ONLY with FRESH LINE-UP only enters on the candle they come together. Check EA ON, Algo Trading, WAIT TILL THEY CLOSE (trades already open), Max trades, spread, day stop, and that BUY / SELL are ON. The guide tells the reason when a signal is skipped.

The AI does not answer.

Type /aitest. "URL not allowed" = add the address in Tools > Options > Expert Advisors. "key rejected" = wrong key or provider. "limit hit" = the provider's free quota; wait or raise it.

The panel feels slow when I change the timeframe.

The new timeframe is applied 0.6 s after your last click and history loads in the background; the first minutes on a new symbol / timeframe download data.

I hid an indicator on the chart - is the filter off?

No. CHART: SHOW / HIDE only draws; ON / OFF is the filter.

Where are my bots and settings stored?

Terminal\Common\Files\GTM - bots, the session and translations. Back this folder up.

Can I run it on several charts?

Yes. Use one chart per magic number, or one chart with many symbols (SYMBOLS tab). The ALL BOTS guard adds them all together.
