01 What GTM EA Bot Studio is

GTM EA Bot Studio is a robot builder that lives **inside MetaTrader 5**. You build an Expert Advisor by dragging coloured blocks onto a workspace on the chart, then test it on the same chart and run it live. No code, no MetaEditor, no compiling.

Build

68 blocks in 9 groups: events, filters, logic, 11 indicators, price and math, orders, trade care, safety limits and tools. A search box finds any block by name.

Test

One click runs the bot over past candles and draws every trade on the chart, with spread, gaps, commission and the moves inside each candle taken into account.

Run

Run live starts the bot on the chart like any EA. A live card shows a tick chart with the trades, the balance curve and the bot's own result. SL / TP boxes follow every open trade.

What it does not do

The Studio is a tool. It does not come with a strategy that is promised to make money, and no setting can promise that. Results depend on the rules you build, the symbol, the broker and the market. Always try a new bot on a **demo account** first. MT5 trades are not fixed-payout contracts: even a Rise / Fall style tick bot wins or loses by how far the price moved, multiplied by the lot.

02 Install and first start

1. Buy or rent the product on the MQL5 Market. In MetaTrader 5 open **Navigators > Market** (or the Market tab of the Toolbox) and press **Install**. The Studio appears under **Navigators > Expert Advisors > Market**.
2. Switch **Algo Trading** on (the button in the toolbar).
3. Drag **GTM EA Bot Studio** onto a chart of the symbol you want to trade. In the window that opens, tick **Allow Algo Trading** and press OK.
4. The builder opens on the chart with a ready example bot. The MQL5 Market takes care of the licence - there is no key to type.

Tip. Give the Studio its own chart. Use the chart's timeframe that your bot is made for - a WHEN block set to "chart" follows it.

03 The screen

Part	What it does
Top bar	Bot name and magic number, Test, Run live, and the buttons for Library , Help and Settings . The fold button shrinks the builder to a small bar so you can see the chart.
Left panel	The block groups and the search box . Type a word ("rsi", "close", "trail") and every matching block is listed.

Workspace	Where you build. Drag an empty spot to move around, mouse wheel to scroll, - and + in the status bar to zoom.
Check card	Warns about a trade without a stop, an empty question or blocks that are outside a WHEN block.
Status bar	Messages, zoom, and the licence badge. Drag the bottom-right corner to resize the builder.
Help box	A movable, resizable box with the guide and the Ask AI chat. It only answers when you ask.

04 How blocks fit together

- **WHEN blocks** (yellow hats) start everything. Steps snap under each other and run from top to bottom.
- **Filters** say "ONLY if ...". When the answer is no, the steps under them are skipped this time.
- **IF** runs its inside only when its question is true. **IF / ELSE** has a second group for "no".
- **Questions** have pointed ends and fit pointed slots. **Numbers** have round ends and fit round slots. An empty round slot holds a number you type - click it.
- Blocks that are not inside a WHEN block are shown faded: they never run.
- **[1]** is the last closed candle, **[2]** the one before. **[0]** is the candle still forming - its values change until it closes, so a test with [0] looks better than real life.

05 All blocks

Group	Blocks
When start everything - nothing runs outside a WHEN block	• WHEN a new [timeframe] candle opens • ON every price tick • AT hh:mm every day • WHEN the bot starts • WHEN a trade of this bot closes
Filters 'ONLY if ...' - when the answer is no, the steps under it are skipped this time	• ONLY between hh:mm and hh:mm • ONLY on Mon-Fri / Mon-Thu / Tue-Thu / Mon-Sat / every day • ONLY if spread <= n pips • ONLY if open trades < n • ONLY if trades today < n • ONLY if n candles passed since the last trade • ONLY if no BUY / SELL / trade is open • ONLY IF (any question)
Logic IF blocks and the questions (pointed ends)	• IF ... • IF ... ELSE ... • a > < >= <= = b • a crosses above / below b • AND, OR, NOT • candle [n] is bullish / bearish / a doji • bullish engulfing, bearish engulfing, hammer, shooting star, inside bar, outside bar at [n] • value is rising / falling for n candles • a BUY / SELL / trade is open • time is between hh:mm and hh:mm • last digit of the price is even / odd / over / under / equal to n • the last n ticks all went up / down
Indicators every indicator has its own timeframe menu and candle number	• Moving average (SMA, EMA, SMMA, LWMA; close, open, high, low, median, typical) • RSI • MACD (main, signal, histogram) • Stochastic (%K, %D) • Bollinger Bands (upper, middle, lower) • ATR • CCI • ADX (ADX, +DI, -DI) • Parabolic SAR • Momentum • Williams %R • highest high / lowest low of n candles

Price & math	• a number you type • close / open / high / low of candle [n] • Bid, Ask, spread (pips) • n pips • a + - x / b • candle body, range, upper wick, lower wick • balance, equity, open profit, today's profit, last trade profit, open trades • hour, minute, day of week • variable • last digit of Bid / Ask
Trade	• BUY / SELL - lots or risk %, SL none / pips / x ATR, TP none / pips / x R / x ATR • BUY LIMIT, SELL LIMIT, BUY STOP, SELL STOP - distance, lots, SL, TP, expiry • CLOSE all / BUY / SELL / profitable / losing trades • DELETE all pending orders
Manage	• BREAKEVEN at n pips / R profit, lock n pips • TRAIL the stop n pips / x ATR behind, after n pips profit • TAKE n % off at n R profit • CLOSE trades older than n candles • CLOSE trades after n ticks
Safety	• STOP the day at loss n % or profit n % (close trades / keep trades) • MAX n trades per day • STOP the bot if equity falls n % below the start • MAX lot size n
Tools	• SET variable to value • CHANGE variable by value • ALERT text (popup / popup + phone / sound only) • NOTE text (written to the Experts log) • STOP new trades for today

06 Build your first bot

1. Open **When** on the left and drag **WHEN a new chart candle opens** onto the workspace.
2. From **Filters** drag **ONLY if no trade is open** under it.
3. From **Logic** drag **IF** under the filter, then drop **a crosses above b** into its pointed slot.
4. From **Indicators** drop a moving average into each round slot. Click 9 / 21 to type the periods, click SMA to pick EMA.
5. From **Trade** drag **BUY** inside the IF. Every BUY and SELL starts with the **smallest lot** of the symbol - click the number to change it, or switch "lots" to "risk %".
6. Add a **Safety** block, for example "STOP the day at loss 3 %".
7. Press **Test**, look at the trades on the chart, change the rules, test again. When you are happy press **Run live**.

Keys: **Ctrl+Z** undo, **Ctrl+Y** redo, **Ctrl+D** duplicate, **Delete** removes the selected block. Drop a block on the left panel to delete it. **Arrange** puts all the stacks in a tidy column.

07 Ready templates

Library > Templates holds seven ready bots. Open one, read how it is built and change it - they are starting points, not finished strategies.

Template	Idea
MA cross + RSI	Trend: EMA 9 crosses EMA 21 and RSI agrees. Risk 1 %, stop 1.5 x ATR, target 2 R.
RSI reversal	Range: RSI turns back up from 30 or down from 70.
Session breakout	Pending orders above and below the price at 08:00; everything is closed at 21:00.
Bollinger bounce	Range: the price closes outside a band while RSI is stretched.
MACD trend	Trend: MACD crosses its signal line on the side of the 200 EMA.
Stochastic pullback	Trend: Stochastic turns from an extreme in the direction of the 100 EMA.
Rise / Fall ticks	Tick bot (Rise / Fall style): 3 rising ticks = BUY, 3 falling ticks = SELL, every trade closes after 5 ticks. Smallest lot and a 3 x ATR safety stop.

08 Quick test on the chart

Test runs the bot that is on the workspace over past candles and draws every trade: an arrow at the entry, a green target zone, a red stop zone, a dotted line to the exit and the result. Pick the range: the candles you can see, 1 month, 3 months or 1 year. **Clear marks** removes the drawings. **Preview** keeps the entry arrows up to date while you build.

What the quick test takes into account

- The **spread** of each candle, and **gaps**: a stop jumped over by a gap is filled at the gap price, not at the stop.
- **Breakeven, trailing and part-closes inside the candle** - they are checked at the candle's high and low.
- The **deepest drop inside each candle** for the drawdown figure, not only the closes.
- **Commission** per lot from the input "Commission per 1 lot".

The card shows the number of trades, win rate, profit factor, net result, average trade and the deepest drop in money and %.

The quick test is a guide built from candles. For exact numbers run the saved bot in the MT5 **Strategy Tester**: type the file name into the input **Bot file** and test the Studio like any Expert Advisor. Leave it blank and the template picked in **Template used when no bot file is given** is tested.

09 Run live and the live card

Run live saves the bot and starts it on this chart. It keeps running after the terminal restarts or the timeframe changes. Algo Trading must be on. **Pause** stops new trades but keeps managing the open ones; **Stop** switches the bot off. Every bot has its own magic number, so two bots never touch each other's trades. You can keep building while it runs - changes reach the running bot when you press Run live again.

The live card

- **Price** tab: the price tick by tick. **B / S** marks where a trade opened, and its profit where it closed. Mouse wheel zooms. **Drag the chart** to look back over the last few thousand ticks and see how earlier trades went; **LIVE** brings you back to now.
- **Growth** tab: the balance and equity curve since Run.
- **BALANCE** and **BOT RESULT**: the account and the bot's own profit, trades and win rate.
- **Boxes**: the SL / TP box of every open trade is drawn on the chart. The red box stays at the **first stop loss**; when breakeven or trailing moves the stop, an orange "SL now" line shows where it is. The box ends where the trade closed. **Closed** shows or hides the boxes of closed trades.
- **Hide** folds the chart away. Drag the bottom-right corner to make the card bigger.

10 Tick bots (Rise / Fall style)

Put the steps under **ON every price tick**. Useful blocks:

- **last digit of the price is even / odd / over / under / equal to n** - looks at the last digit of the Bid.
- **the last n ticks all went up / down** - finds runs of ticks.
- **CLOSE trades after n ticks** - closes every trade of the bot after n ticks, like a Rise / Fall contract.

The **Rise / Fall ticks** template is a complete example. Keep a safety stop on every tick trade - a tick bot can open many trades in a short time.

11 Safety and risk

- **Risk %** sizes a trade from its stop loss: 1 % means that hitting the stop costs about 1 % of the equity.
- **Safety** blocks guard the whole bot from wherever they sit inside a WHEN block: daily loss / profit stop, most trades a day, equity stop and the biggest lot.
- A trade without a stop loss is flagged by the Check card.
- When the bot sends no trades, the reason (Algo Trading off, market closed, no money, licence) is written in the **Experts** tab.

12 Save, open and share

Library > Save keeps the bot as a small **.gtmbot** file. Your work is also saved by itself every few seconds.

- **Share** makes a file anyone with GTM EA Bot Studio can open, change and run.
- **Share locked** makes a file others can **test and run**, but never open - your blocks and settings stay hidden.
- Shared files appear in **Common\Files\GTM_Studio\share**. The other person puts the file into **Common\Files\GTM_Studio\bots** and it shows up in their Library. Share files are encrypted: changing them by hand breaks them.
- A shared bot runs only inside GTM EA Bot Studio, so the other person needs their own copy of the Studio.

13 Languages and the AI helper

The Studio speaks English. **Settings > Language** lists the languages on this computer. To add one, type its name (for example Sinhala) and press **Translate**: your AI key is used once to translate every word, and the result is saved as a file that works from then on without the AI. You can correct any word in that file with Notepad.

The **Ask AI** tab of the help box answers questions about building bots - only when you ask.

Setting up the AI (optional)

1. Get an API key from any AI service and paste it into the input **AI API key**.
2. In **AI model** pick a model from the list, or leave **Automatic** and the best model your key can use is found by itself. If the picked model belongs to another service than the key, the key's service is used.
3. Other OpenAI-compatible services work too: pick **Custom**, type the model name into **Custom model name** and the API address (the "base URL", usually ending with /v1) into **AI API address**.
4. Allow the address: **Tools > Options > Expert Advisors > tick Allow WebRequest for listed URL** and add the address shown in **Settings > AI connection**.
5. Press **Test AI** in Settings. It says whether the AI works and which model answered. **Find model again** searches again.

14 AI addresses to allow

Service	Key starts with	Add this in Allow WebRequest
Google Gemini	AIza...	https://generativelanguage.googleapis.com
OpenAI	sk-...	https://api.openai.com
Anthropic Claude	sk-ant-...	https://api.anthropic.com
Groq	gsk_...	https://api.groq.com
DeepSeek	sk-...	https://api.deepseek.com
xAI Grok	xai-...	https://api.x.ai
Mistral	(no prefix)	https://api.mistral.ai
OpenRouter	sk-or-...	https://openrouter.ai

Free keys have small daily limits: if an answer fails with HTTP 429, wait a little. The exact reason of any AI failure is also written in the Experts tab.

15 Inputs

Input	Meaning
Bot file to run in the Strategy Tester	File name of a saved bot. Blank = the template below.
Template used when no bot file is given	One of the seven templates, for the Strategy Tester.
Points in one pip	0 = found by itself (10 on 5-digit symbols).
Max slippage (points)	The largest price change accepted when an order is sent.
Commission per 1 lot	Used by the quick test: open + close, in account money.
Sounds	Interface and trade sounds.
AI API key	Optional - help chat and translation.
AI model	Automatic, a model from the list, or Custom.
Custom model name	Used when Custom is picked.
AI API address	Blank = found from the key or the model.

16 Files and folders

Everything is kept in the terminal's common folder (**File > Open Data Folder**, one level up, then **Common\Files**):

Folder	Holds
GTM_Studio\bots	saved bots (.gtmbot) and received shared bots
GTM_Studio\share	files made with Share / Share locked
GTM_Studio\lang	language files
GTM_Studio	automatic workspace save, live state and settings

17 Questions and answers

The bot runs but opens no trades. Look at the Experts tab: the reason is written there (Algo Trading off, market closed, a filter that is never true, not enough money).

The quick test says indicator data is loading. A new indicator needs a moment. Press Test again; scroll the chart back for more history.

The builder is not visible. Remove the Studio from the chart and attach it again - it always opens unfolded and is moved back into view by itself.

The AI does not answer. Check the address is allowed (see the table), press Test AI, and read the reason in the Experts tab.

Can two bots run at once? Yes - one Studio per chart. Each bot has its own magic number.

18 Risk warning

Trading foreign exchange, CFDs and other leveraged products carries a high level of risk and may not be suitable for every investor. You can lose more than you deposit. Past results, including the results of the quick test and the Strategy Tester, do not guarantee future results. GTM EA Bot Studio is a software tool; it does not give financial advice and does not promise any profit. Try every bot on a demo account before using real money.
